

## What is eSommelier?

### RESIDENTIAL

eSommelier is an in-cellar wine inventory management system which informs collectors about what they have, where they have it and most importantly when they should drink it.

### HOSPITALITY

Unlike any other wine management method, this innovative wine cellar management system gives you:

- Access to your cellar anywhere in the world
- Up-to-the-minute inventory accuracy

### COMMERCIAL

- Tasting notes, drinking dates, label images, and your collection's value on-demand

### NEW BUILD

### REMODEL

## Wine Cellar Management

Enjoying your wine collection isn't always about acquiring more, but rather knowing more about what you've acquired.

eSommelier's Wine Management System is an in-cellar management system that informs you about what wine you have, where it's located and most importantly, when you should drink it.

Removing a bottle is as easy as waving it under the scanner. Entering new acquisitions is as simple as making a deposit at an ATM machine. Want to view your collection remotely? With eSommelier's *MyWine Portal*, your collection can be accessed from any internet-connected computer or PDA in the world with only your user name and password.

The system is comprised of an elegant 15" diagonal LCD color touch panel, a bar code scanner and bar code printer. Together, they rest on a counter-top in your cellar, or separated, the touch-panel can be easily mounted to a wall.

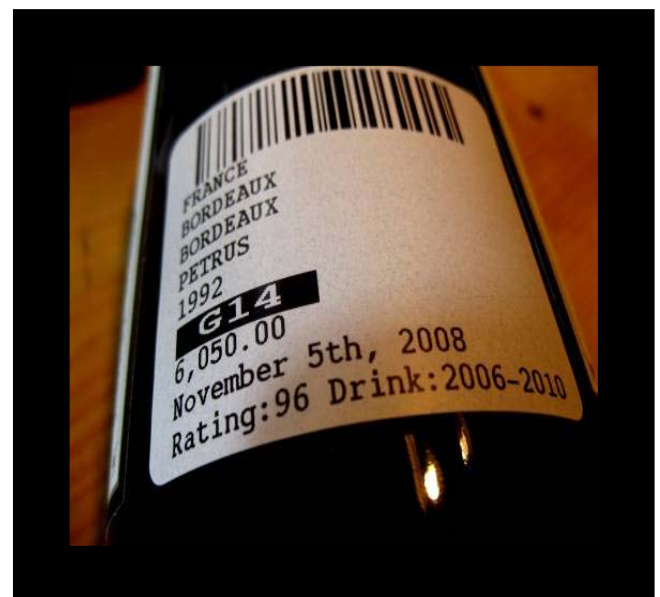

The fun to use, touch-screen system shows you what you have in your collection, where each bottle or case is stored, along with specific attributes such as tasting notes, drinking dates, label images, and value. Your eSommelier system integrates with

[www.eRobertParker.com](http://www.eRobertParker.com) and Stephen Tanzer's [www.wineaccess.com](http://www.wineaccess.com) should you wish to collect information about your wine from those sources.

### Optional features include:

- *Temperature/Humidity Sensor:* This feature sounds an alarm when the cellar's temperature or humidity exceeds the proper range and generates useful reports over time.
- *Spreadsheet Upload Software:* A software accessory for collectors who already have their collection organized in Microsoft Excel. It allows that data to be imported into the eSommelier system.
- *Multiple Cellar Software:* This software module adds features for users with one eSommelier system but multiple wine cellars. It enables the contents of each cellar to be tracked individually.

## FAQ

**Q. How accurate is the Temperature Humidity sensor?**

A. Temperature is accurate to plus or minus .5 degree. Humidity is accurate to plus or minus 1%.

**Q. What happens when you upload Excel on top of an already existing database?**

A. All Excel uploads are additive, or in otherwords, added to whatever is already there. To ensure that uploads do not create duplicates, clients must clear out already uploaded data prior to uploading new data.

**Q. If you want to enter a bottle into a space which is already taken, does the system let you know?**

A. No, and here's the reason. Because eSommelier doesn't not know how many bottles any space in the cellar can hold, (shelf, bin or room) we do not have the concept of any particular space being "taken". The location can be a shelf, a bin or even a room. Rather than "preassign" locations for bottles, eSommelier users just enter the location at the time you inventory the bottle.

**Q. Is the return policy 30 days from ship, delivery, or order date**

A. Delivery

**Q. Can you hook up a house alarm system to eSommelier so that when the temperature goes wrong, the house alarm sounds – not just the eSommelier system?**

A. Yes. To do so, a technical person such as your client's audio/visual integrator would need to get involved and use the published protocol on our website to extract that temperature alert indication and create a contact closure. The contact closure can then be given to the alarm company to signal an alarm condition.

**Q. Does the Deluxe version work with anything other than Crestron?**

A. Yes, a system called AMX.

**Q. What's the difference between CellarTracker and eSommelier?**

A. Unlike Cellar Tracker, eSommelier is a high-end, fully supported, complete solution dedicated to manage someone wine cellar, not just free downloadable unsupported software that is cobbled together by a do-it-your-selfer on a spare computer. Managing your cellar on a spare computer poses risks that someone may use that computer for other purposes, inadvertently install viruses, change configuration and usefulness of the machine.
